

## M80 556 (5.56MM)

### M80 556: Extreme Accuracy With Full-Auto Reliability.

The **Whisperstrike M80 556** is engineered for shooters who expect accuracy, reliability, and clean performance from a 5.56 suppressor. Its advanced gas-flow architecture strips, cools, and slows high-pressure gases to deliver quiet operation, smoother recoil impulse, and minimal backpressure. Shot behavior stays predictable and consistent, even during extended strings of fire.

#### Accuracy You Can Trust

The M80 556 maintains stable point of impact through slow fire and rapid engagement. Flash is significantly reduced, gas blowback is limited, and follow-up shots remain easy to control. Whether mounted on a precision rifle or a lightweight carbine, the M80 556 keeps rounds exactly where they should go.

#### Designed for Sustained and Full-Auto Fire

Titanium construction and a high-volume internal structure give the M80 556 the durability needed for high-heat applications. It stays stable and reliable under demanding round counts, making it a dependable choice for shooters who push their rifles hard.

#### Includes a 3D-Printed HUB Direct Thread Mount

Every M80 556 includes a 3D-printed titanium HUB-compatible direct-thread mount with an integrated brake section. **Most companies supply nothing** or only a basic end cap, but Whisperstrike includes a premium mounting solution that uses the internal space more efficiently and improves performance.

#### Compatible With Most HUB Mounts

With the brake removed, the M80 556 is fully compatible with HUB 1.375x24 mounting systems. This allows the suppressor to pair with most QD and direct-thread attachments across the industry. Shooters can configure the can for their preferred platforms without buying proprietary hardware.

#### Titanium Strength for Real-World Abuse

Built from Ti64V ELI Grade 23 titanium, the M80 556 offers long-term durability and excellent heat resistance. Its 1.75-inch diameter provides internal volume needed for efficient gas control, giving the suppressor stable, clean performance in the harshest conditions. Expect minor initial sparking with 3D-printed titanium suppressors.

#### Why Choose the M80 556?

- Accurate: Stable point of impact through rapid or sustained fire.
- Full-Auto Rated: Built to handle high heat and heavy round counts.
- Quiet: Efficient gas management for clean, consistent suppression.
- Included: 3D-printed Titanium HUB Brake.
- HUB Compatible: Works with most 1.375 x 24 mounts once the brake is removed.
- Rugged Build: Heat-resistant Grade 23 titanium for long-term durability.
- Cleaner Shooting: Reduced flash and minimal gas blowback for better control.

Available in the following colors: **Black, FDE, OD Green & Tungsten.**
