

WHISPERSTRIKE

PRECISION SILENCE

CARBINE 9 (9MM)

Carbine 9: The PCC Suppressor Built for Accuracy and Abuse.

The **Whisperstrike Carbine 9** is engineered for shooters who expect accuracy, reliability, and clean performance from a PCC suppressor. Designed specifically for carbines and fixed-barrel platforms, it requires no booster, keeping the system simple and dependable. Its advanced internal architecture manages gas flow to reduce blast, soften recoil impulse, and maintain smooth, consistent operation. Shot behavior stays predictable and repeatable, even during extended strings of fire.

Precision You Can Count On

The Carbine 9 maintains consistent point of impact through both slow fire and rapid strings. Its symmetrical baffle design minimizes shift, while reduced blast and controlled gas flow keep the system stable and easy to track. Follow-up shots stay fast and predictable, helping shooters keep rounds exactly where they want them.

Effective Sound Suppression

The Carbine 9 delivers up to 30 dB of sound reduction, significantly lowering report and improving overall shootability across both supersonic and subsonic ammunition. Its efficient gas management system helps control tone and reduce sharp blast, creating a smoother, more refined shooting experience. Whether at the range or in training, it keeps shooting enjoyable and predictable.

Full-Auto Rated. Built to Endure.

Built from 3D-printed titanium with a one-piece internal structure, the Carbine 9 is made to handle heat and high round counts. It remains stable and reliable under sustained fire, including full-auto use. Whether on the range or in demanding conditions, it delivers the durability PCC shooters expect.

3D-Printed Titanium. Proven Durability.

Built from Ti64V ELI Grade 23 titanium, the Carbine 9 delivers long-term durability with excellent heat resistance. Its one-piece 3D-printed construction provides the internal volume needed for efficient gas control, resulting in stable, consistent performance under demanding conditions. Minor sparking may occur during initial use, which is normal for 3D-printed titanium suppressors.

Optimized Dimensions for PCC Platforms

At just 7 inches in length and weighing only 8.2 ounces, the Carbine 9 keeps PCC platforms fast, balanced, and easy to handle. Its 1.5" diameter allows it to fit under most AR handguards, making it ideal for tucked or integrally styled builds. The result is strong performance without unnecessary bulk.

Why Choose the Carbine 9?

- **Accurate:** Consistent point of impact with minimal POI shift, even during rapid fire.
- **Full-Auto Rated:** Built to handle heat and high round counts without compromise.
- **Quiet:** Up to 30 dB reduction with a smooth, controlled sound signature.
- **Durable:** 3D-printed Grade 23 titanium for long-term strength and heat resistance.
- **Cleaner Shooting:** Reduced blast and controlled gas flow for improved comfort and control.
- **PCC Optimized:** Purpose-built for carbines and fixed-barrel platforms. No booster required.
- **Lightweight:** Just 8.2 oz for fast handling and balanced setups.
- **Handguard Compatible:** 1.5" diameter fits under most AR handguards.
- **Simple Mounting:** Direct thread design for secure attachment.

Available in the following colors: **Black, Burnt Bronze, FDE, OD Green & Tungsten.**

Carbine 9 - Flat Dark Earth

7" Length. 1.5" Diameter. Built to Fit.

1/2x28 Direct Thread

Calibers: 9mm (or anything under)
Construction: Titanium
Finish: Cerakote C-series
Diameter: 1.5"
Length: 7"
Weight: 8.2oz
Attachments: 1/2x28 Direct Thread
Full-Auto Rated: Yes
Sound Reduction: Up to 30dB
